Childhood obesity has increased at an alarming rate over the last 20 years. Today, nearly one in five children is battling this condition and if patterns predict the future, almost all of America's children will be living with diabetes, heart disease, and dying younger due to obesity within the next 20 years.

Childhood obesity is a condition characterized by presence of excess fat in the body of a child aged above two years (Birch, et al, 2011). There is no definite and direct way of determining if one has excess fat in their body, conversely, the Body Mass Index (BMI), is used to determine whether one is obese or not.
