The sardine run of southern Africa occurs from May through July when billions of sardines – or more specifically the Southern African pilchard *Sardinops sagax* – spawn in the cool waters of the Agulhas Bank and move northward along the east coast of South Africa. Their sheer numbers create a feeding frenzy along the coastline. The run, containing millions of individual sardines, occurs when a ...

In other words,  $R^2$  always increases (or stays the same) as more predictors are added to a multiple linear regression model, even if the predictors added are unrelated to the response variable. Thus, by itself,  $R^2$  cannot be used to help us identify which predictors should be included in a model and which should be excluded.

### **5.3 - The Multiple Linear Regression Model | STAT 462**

An elevated WBC is a well-recognized indicator of inflammation. 6 The total number of WBCs and each subtype (for example, neutrophils, monocytes, lymphocytes, and eosinophils) have been implicated as predictors of CHD. 6 Nearly all of the cellular elements in the blood, including WBCs, red blood cells (RBCs), and platelets, are involved in the ...

Most people in the Midwest or New England have heard at one time or another that if you want a forecast for the upcoming winter that you should just look for a woolly bear (black at both ends and a reddish brown or rust colored in the middle) or fuzzy bear caterpillar. This same caterpillar is called the woolly worm in southern United States. Yet another name for this caterpillar is the ...

A little bit of multicollinearity isn't necessarily a huge problem: extending the rock band analogy, if one guitar player is louder than the other, you can easily tell them apart. But severe multicollinearity is a major problem, because it increases the variance of the regression coefficients, making them unstable.
